OS Version	Up to Android 12		Up to Windows 11

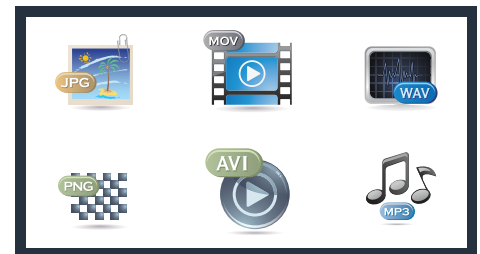

Features:

Painting on the wall; that says it all. Give your customers a TV to watch and your products to buy. Save your floor space and hang your digital signage on the wall to display content in up to 4K resolution, in 350 nits of brightness and with 178-degree FOV for superior clarity and visibility from any angle.

Not the TV you see. It's the TV you seek. You can pick what you want, from the display size and type to the hardware and software configurations. Choose between Android or Windows, customize the apps to your requirements and run them on the signage without any flaws.

Play any file, Display your style. Run any media format, from image and video files to even 3D interactive software. All thanks to the capable processor, along with up to 4GB RAM and up to 32GB of local storage.

In the clouds, yet down to earth. Your display signage is always online and ready to guide the customer, with support for ethernet, Wi-Fi, 3G and 4G cellular network connectivity. Use the Truecast tool to manage and broadcast your content and the dotHive tool to control the kiosk remotely, over the cloud.
