OS Version	Up to Android 12		Up to Windows 11

Features:

Painting on the wall; that says it all. Give your customers a TV to watch and your products to buy. Save your floor space and hang your interactive signage on the wall to display content in up to 4K resolution, in 350 nits of brightness and with 178-degree FOV for superior clarity and visibility from any angle.

Not the TV you see. It's the TV you seek.

Customize everything from screen size and colour options to the OS of your choice. You can choose between Android or Windows, customize the apps to your requirements and run them on the kiosk without any flaws.

Your window into the customer's mind. Understand what they want, and give it to them, even before they know it. Collect insights from customer interactions with our 10-point interactive touch panel with an 8 ms response time to provide them the best personalized experience, so that they'll come back for it again.

In the clouds, yet down to earth. Your signage is always online with options like ethernet connection, Wi-Fi, 3G and 4G cellular network connectivity. Remotely manage the content you play using the inbuilt Truecast tool and manage the whole kiosk with the dotHive tool.
